Speaker Bio

Stephan Schomberg

Project Management for 25+ years ERP and EAM

Project Management Implementations

Over 100 locations successfully implemented across NA

15 different industries (everything from bagels to airplanes)

Application expert and certified in both Infor ERP and Hexagon EAM

Developed supply chain strategies for several fortune 500 companies.

Who Is Elevotec?

Elevotec Inc provides solutions for Enterprise Asset Management, Enterprise Resource Planning and Business Intelligence.

We are a **proud Partner of both Infor and Hexagon** that has spent over 15 years working closely with Product Development, Product Sales, Product Support and Consulting Services to deliver sound solutions, value and quality implementations.

Our products are:

**HxGN EAM – Enterprise Asset Management,
Infor LN, CSIE - Enterprise Resource Planning,
Infor BIRST - Business Intelligence**

We combine our “**Enable, Evolve and Elevate**” approach with our capabilities to help customers succeed in both Commercial and Public Sectors, aligning there needs to the **best solution and implementation.**

Introduction

We would like to show you a Google Chat connection to HxGN EAM where you can chat real-time and have two-way communication between EAM and your chat group. This is a great way for everyone to participate in critical asset maintenance without needing to log into the application. Speeding up communication for collaboration and decision making that can save valuable time and get critical assets back up and running.

Our Changing workforce

As our maintenance workforce gets younger, they want the tools that simplify their day-to-day tasks, give them access to the information they need at their fingertips and do all of this as fast as possible.

People under 40 today prefer and rely on **device first tools** that provide complete and real-time information to assist them in completing their work.

They need to replace any potential lack of experience with quick access to answers or collaboration with others to solve the problems.

Our Changing workforce

Phones and tablets have replaced computers as the most used devices for business functions.

What is a computer??

You can complete most business processes from start to finish on a mobile device, so why have a process that forces people to go back and forth from one device to another.

Doesn't that sound inefficient?

Our Changing workforce

I don't want to get into a conversation about Ai and the good and bad aspects of that but the **availability of information**, how to's, instructions and videos are going to change how we do things.

We used to say, "google it".

Now Ai is **not going to change that bearing** when it fails.

But if I have never changed one it can show me how.

It could suggest a longer lasting bearing brand or type. If I can't find the exact bearing it can help find an available alternative.

All in seconds.

Our Changing workforce

So, I guess it comes down to do we embrace new technology as another tool in our toolbox.

We will always **need boots on the ground** to fix things so let's give them all the tools and help to make them successful.

Today's Google Chat demo

This is a pre-recorded presentation and demo. When we get to the demo part, I will be pausing it and explaining what is happening as it goes very quickly and is not easy to see the details.

Chatting with Your Enterprise Asset Management Solution
